Product Manager, Chan Kun Lee

Structure first. Then numbers.

I start every product with two checks.

Where users actually get stuck, and which number will confirm the fix. From an AI voice assistant to a location-data solution, a logistics digital twin, and an overseas buyer-discovery SaaS, those two questions never changed.

At DeepSales I designed the whole product as the only PM on a four-person product team, and shipped v1 six months after I joined.

Selected projects

All 17

Project	Result	Company
Deep-Tech TIPS selection	Contributed to a KRW 1.5B government R&D grant	DeepSales
v2 renewal	Staged revamp of auth, onboarding, billing, and in-product screens	DeepSales
Domestic and global product split	Split market strategies; led the global version's core features	DeepSales
AI sales agent	Automated everything from ICP inference to campaign sequences, starting from one URL	DeepSales
Whole-product design for v1	41 paying customers, KRW 495M revenue in 135 days	DeepSales
Platform renewal	Expanded from B2B into B2C and B2G	Creative Design Lab
AI sales training and live evaluation	Planned and shipped LLM conversational training sessions	Creative Design Lab
Pulmuone Foodmerce digital twin	Main PM for build and operations; about $6M a year in efficiency scale	WATA AI
USFK Camp Humphreys logistics warehouse	Managed the PoC; won at KRW 7B total contract value	WATA AI
Global PoCs	Dubai Police, DHL Singapore	WATA AI
Map Editor and platform consolidation	Planned a virtual warehouse design tool; consolidated legacy services	WATA AI
loplat X	Advanced a location-data B2B solution and helped win clients	loplat
Pro-baseball service Bullpen	Owned the launch from MVP through QA round 3	loplat
NUGU service standards	Share 18% to 26% during the PyeongChang period	SK Telecom
T map integration and location-based ads	Korea's first vehicle location-based ad model	SK Telecom
2022 World Cup bid PR	Press response at the FIFA host selection; ran the London conference booth	World Cup Bid
Mascot Baekho	Owned the mascot from concept through production	KFA

41

Paying customers, 135 days after the v1 launch

$0.37 M

Cumulative revenue over the same 135 days (KRW 495M)

$5.3 M

Total contract value of the USFK Camp Humphreys logistics warehouse project I helped win

+8 %p

NUGU's domestic share gain at SKT over the PyeongChang service period

01 Define it, structure it, confirm it in numbers

The products changed. The order didn't.

Before I draw a single feature, I redefine the problem this product actually has to solve.

I find drop-off points in **logs and metrics**, confirm why people drop off in **user interviews**, and check the fix with an A/B test. The more people's requirements are tangled together, the more it pays to split the structure into documents first, so the numbers can be read.

At the KFA and the FIFA host selection I learned to work governments, companies, and international media at the same time. At SKT I set the standard for a conversational AI service, and in startups I built a way to carry a product to launch with limited headcount.

01

Structuring the requirements

Accounts and auth, input and validation, extraction and storage, discovery and campaigns, billing and subscriptions, errors and exceptions. I split six intertwined areas into policy docs kept apart from the screen specs, so a changed value means editing one document.

02

Confirming user problems with data

I find drop-off points in logs, confirm the reasons in user interviews, and verify fixes with A/B tests. I build my own dashboards with SQL, GA, and Amplitude.

03

Scoping inside the schedule

With limited planning and engineering capacity, I set the MVP scope to hit opening day and led the launch through the third QA round. With an overseas dev partner, an eight-week roadmap and weekly check-ins carried us through M1 to M5 without a stoppage.

04

Aligning stakeholders

At the 2022 World Cup Bid Committee I worked the FIFA host selection in Zurich, a London conference, and the World Cup ground in South Africa, aligning government bodies and global institutions. At WATA I ran on-site PoCs with USFK Camp Humphreys, the Dubai Police, and DHL Singapore.

02 Selected work and outcomes

Scope and outcomes, project by project.

DeepSales

Deep-Tech TIPS selection, v2 renewal, market-specific strategy, the AI sales agent, and whole-product design for v1

2025.11 ~ Present
PM Senior Manager

Deep-Tech TIPS selection and government R&D grant

I **proved the product's technical competitiveness through an external review and secured a 1.5B KRW government R&D grant**. It didn't end at selection; I also kept the R&D roadmap aligned with the product roadmap.

1.5B KRW R&D grant | Deep-Tech TIPS | R&D roadmap PM

Selected Won final selection for the Deep-Tech TIPS program (TIPA) by proving the technical merit of the AI sales agent, contributing to a 1.5B KRW government R&D grant.

Owned Led the full process end to end as PM, from the proposal to the in-person review presentation, structuring the product's technical and commercial case to the evaluation criteria.

Aligned Tied the R&D program's technical goals to the product roadmap, defining the core direction: deeper inference of overseas buyers' purchase intent.

Operate As PM for the post-selection technical reviews, I owned milestone scheduling, technical research, action-item definition, and cross-team distribution.

v2 renewal

I planned the v2 renewal, **revamping auth, onboarding, billing, and the in-product screens in stages**.

incremental renewal | auth and onboarding | billing | in-product screens

Scope Defined the revamp scope by area: auth, onboarding, billing, and the in-product screens.

Approach Designed the renewal to roll out area by area in stages rather than all at once.

Two products for two markets: splitting the domestic and global strategy

Even for the same product, a different market maturity calls for a different strategy. I **split the product direction along the gap in CRM literacy between domestic and global users**, and personally led the core features of the global version.

domestic vs global split | US office | fundraising support

Domestic For Korean users with lower SaaS and CRM literacy, framed the product as an "AI sales lead" that fills the pipeline and handles everything from email sending to CRM management on the user's behalf.

Global For North American users who already source their own leads and know CRM well, designed and built the product to layer AI onto a traditional CRM workflow as an assistive tool rather than a replacement.

Features Led the global version's core features: LLM-prompted email sequencing, CRM pipeline management, auto-replies, and meeting recording with conversation analysis.

Growth Used the outcome to support the US-office expansion and investor fundraising.

AI sales agent: from ICP inference to campaign sequences

I redesigned a sales process scattered across lead sourcing, campaign creation, and CRM into **an AI agent that automates everything from ICP inference to campaign-sequence generation, starting from a single company URL**. Work that took many manual steps now finishes in one run.

URL to campaign | auto ICP inference | auto campaign sequences | 60M+ company DB

Design	Built a flow where a company name and homepage URL alone infer the account's ICP, then carry through buyer screening, targeted lead sourcing, and campaign-sequence generation in a single pass.
Data	Designed the data-filtering logic that screens and targets potential buyers (ICP) in real time against a database of 60M+ companies.
Reliability	Designed a human-in-the-loop approval structure and guardrail sequences to contain autonomous-AI risk (hallucination and the like), securing enterprise-SaaS-grade stability.
Launch	Relaunched the product as an AI agent and landed 52 early customers. Annual revenue grew about 5x, from roughly $0.8M to $3.8M.

Whole-product design and the v1 launch

I **split six intertwined areas into policy documents and designed the whole product**, then shipped v1 six months after joining. I was the only PM on a four-person product team.

41 paying customers in 135 days | KRW 495M cumulative revenue | 6 policy areas

Design	Split accounts and auth, input and validation, extraction and storage, discovery and campaigns, billing and subscriptions, and errors and exceptions into policy documents kept apart from the screen specs, so a changed value means editing one document.
Integrate	Designed the Apollo API query conditions and field mapping, the Toss Payments and Stripe billing integrations, and the billing and settlement logic for three subscription tiers.
Architect	With the CTO, split the system into a stability-first backend and a change-friendly automation layer and locked the tech stack (Next.js, PostgreSQL, n8n, OpenRouter). Chose the overseas dev partner by comparing U.S. and Eastern European vendors, then ran an eight-week roadmap with weekly check-ins through M1 to M5 without a stoppage.
Result	135 days after launch: 41 paying customers and KRW 495M in cumulative revenue. Sales earned that revenue first; my part was shipping a product sales could sell, on schedule.

Creative Design Lab

2025.05 ~ 2025.07
PM Lead

Reported to the founder; renewed the platform and shipped an AI sales-training feature

Platform renewal and expansion from B2B into B2C and B2G

I **renewed the platform's service flow and information structure** and extended an enterprise-focused business into consumer and public-sector markets.

information structure renewal | Hyundai Livart won | key accounts renewed

Renew	Renewed the platform's service flow and information structure to improve usability and operating efficiency.
Expand	Extended an enterprise model into consumer and public-sector markets, leading new-account wins (incl. Hyundai Livart) and key renewals.
Schedule	Ran planning, engineering, and design on two-to-four-week sprints and balanced new features against legacy maintenance.
Clients	Ran regular meetings and technical feedback loops with major clients such as Samsung Fire & Marine Insurance and SKT, and personally led service briefings and user-training presentations.

AI sales-training sessions and a real-time evaluation system

I planned and shipped, as a new feature, **conversational sales-training sessions built on AI prompts and an LLM that reps can use anytime, anywhere**, along with a real-time evaluation system.

new feature shipped | LLM conversational training | real-time evaluation

Training Planned and shipped conversational sales-skills training sessions built on AI prompts and an LLM, so reps can practice by talking, anytime and anywhere.

Evaluate Planned and shipped a real-time evaluation system that gives insights from the conversation.

WATA AI

2024.07 ~ 2025.05
PM Senior Manager

Built a spatial-intelligence AI platform and led large-scale logistics DX

Pulmuone Foodmerce digital twin: build and operations

I joined the already-won Pulmuone Foodmerce Yangji Center digital twin project as **main PM, owning the build and operations**. The work moved manual, inefficient warehouse operations onto a digital twin.

main PM | about $6M/yr operating-efficiency scale | on-site build and ops

Build Built picking navigation and ESL digital-label infrastructure on the floor, and planned and refined the admin pages that digitize manual work.

Deploy Drove on-site deployment of autonomous forklifts and LiDAR vision as PM.

Safety Designed forklift dash-cam, LiDAR, and camera-based collision-detection and object-detection logic, and planned the tablet app screens for floor workers.

USFK Camp Humphreys logistics warehouse: deal won

I worked with logistics supply officers at Camp Humphreys in Pyeongtaek to **plan a warehouse logistics service and manage the PoC**, and the project was won at a total contract value of about KRW 7B.

KRW 7B total contract value | deal won | PoC management

Plan Worked with supply officers to plan the warehouse logistics service.

PoC Managed the PoC end to end.

Won Won at a total contract value of KRW 7B (about $5.3M), a one-time total rather than an annual figure.

Global PoCs and technical partnerships

I ran PoCs on site with **the Dubai Police and DHL Singapore**, demonstrating features and collecting requirements, and coordinated schedules and specs with overseas developers.

Dubai Police | DHL Singapore | BIPROGY Tokyo exhibition

Dubai Planned a LiDAR-based crowd-management platform and handled the on-site technical roadshow and feature demos for Dubai Police officials.

Singapore Joined the DHL Singapore on-site PoC and feature-development talks to analyze requirements, and demoed features at the BIPROGY exhibition in Tokyo to find prospective customers.

Platform consolidation and Map Editor

I **consolidated services scattered across the legacy stack into one platform** and planned a virtual warehouse design tool and a statistics dashboard as new products.

single-platform migration | Map Editor | statistics dashboard

Consolidate Consolidated and migrated platform services fragmented across the legacy system into a single platform.

Tool Planned "Map Editor", a Unity-based virtual warehouse design platform, and managed the project.

Dashboard Planned a statistics dashboard on real-time data collection and a new developer site that made technical integration easier for outside partners.

loplat

Advanced a location-data B2B solution and launched a new community service

2021.11 ~ 2023.03
PM 매니저

Location-data B2B solution "loplat X"

I **advanced WiFi-fingerprint location data into a B2B solution** and planned the technical proofs and PoCs that helped win clients.

feature upgrades | technical-proof PoCs | Braze partnership

Solution Advanced the WiFi-fingerprint-based "loplat X", helping win B2B clients and grow revenue.

Proof Planned technical proofs and PoCs that verified location-recognition accuracy to win clients, and wrote tailored service proposals.

Partnership Supported the Braze global partnership deal and ran technical collaboration with Samsung Electronics Sales and Shinsung Tongsang.

Admin Designed the UI and UX of the admin console for the location-data B2B solution and led communication with developers.

Pro-baseball service "Bullpen"

I planned a new service on **visit data from more than 1 million baseball fans** and launched it for opening season with limited headcount.

1M+ data points | MVP through QA round 3 | real-time dashboard

Plan Designed the service logic that collects user identifiers from stadium-visitor data and grows MAU.

Launch Set the MVP scope to hit opening season within limited planning and engineering capacity, and owned the launch cycle through the third QA round.

Analyze Built a real-time performance dashboard in Power BI and supplied market-analysis material for B2B sales from visitor-data analysis.

SK Telecom

Set the service standards for the NUGU AI speaker and planned its PyeongChang Olympics service

2016.04 ~ 2018.04
서비스기획 매니저

'NUGU' product strategy and CUI design

At a time when conversational AI had no established standard, I **set the bar for persona and dialogue scenarios myself** and planned a service built around a national event.

share 18% to 26% | persona design | utterance-quality checks

Persona Defined NUGU's service identity, persona, and tone, and built the standard for its speech system and UX scenarios.

Olympics Planned a PyeongChang 2018 Winter Olympics AI service and tied it to marketing. NUGU's domestic market share rose from 18% to 26% over that period.

Analyze Analyzed user behavior logs and VOC for NUGU and the schedule app to find drop-off points and reprioritize core features.

Quality Owned utterance-system testing for conversational NUGU, led the process for verifying speech-recognition rate and response accuracy, and benchmarked quality against competitors.

T map integration and location-based advertising

I **integrated a voice service with T map** for use while driving and widened the business model with vehicle-location advertising and a municipal information service.

first LBS ad in Korea | T map integration | municipal partnership

Integrate Planned the T map and NUGU integration, designed voice-command structures by driving situation, and led recognition-rate improvements by analyzing driver data.

Ads Planned Korea's first vehicle location-based B2B and B2G advertising model, which announces nearby landmarks by voice as the car passes through an area.

Public Built, with local governments, a service model that announces local festivals and public information in real time.

2022 World Cup Bid Committee

2010.04 ~ 2010.12
기획홍보 사원

Global PR and governance for a nation-scale mega event

World Cup bid strategy and global governance

For the 2022 World Cup bid I **worked across Switzerland, the UK, and South Africa, handling global media and top-level governance**, running the field side of a nation-scale project.

FIFA selection day | London conference | global media

On-site Deployed to the FIFA host-selection event in Zurich as a press officer for the Korean delegation, supporting the official spokesperson and running press-release distribution and media support worldwide.

Conference Owned Korea's booth at the "Leaders in Football" conference in London end to end, briefing global football executives and business leaders on the bid vision.

Content Led ambassador casting (Park Ji-sung, Kang Sue-jin, Park Tae-hwan) and ad production, and tied a bid-support film to the 2010 South Africa World Cup street cheering to build nationwide momentum.

Korea Football Association

2009, 2011
기획/운영

National-team branding and nationwide youth-league operations

Mascot 'Baekho' and league administration

I **owned the national team's symbol mascot 'Baekho' from the concept stage** and ran operations and budget administration for the nationwide school leagues, laying my foundation in sports administration.

mascot 'Baekho' launch | national league ops

Branding Owned the full process for "Baekho", a mascot reflecting the national team's identity, from detailed concept to design review, production, and on-site use.

League As operations lead for the nationwide school football leagues, ran large-scale funding, budget management, and a transparent expense process.

PR To raise amateur-league awareness, planned a celebrity ambassador program (girl group Dal Shabet) and brought the mascot on-site for spectator-friendly branding.

03 Skills and tools

Planning, data, and external-integration design, all hands-on.

Product

IA · PRD · WBS · Roadmap · A/B Test · Policy docs · Screen specs

Data

SQL · Google Analytics · Amplitude · Power BI · Log analysis

Build

HTML / CSS / JavaScript · Python · Playwright · n8n · Claude · Gemini

Integration

Apollo API · Toss Payments · Stripe · Gmail API · Nylas · OpenRouter

Collaboration

Jira · Confluence · Notion · Slack · Figma

Communication

Stakeholder alignment · Cross-functional leadership · Executive (C-level) partnership · Global communication · Business English

04 Career path

From sports administration to AI services and B2B SaaS.

2025 ~ Present
DeepSales
The only PM on a four-person product team; designed the whole product and shipped v1 in six months.

2025
Creative Design Lab
Reported to the founder, renewed the platform, and shipped an AI sales-training feature.

2024 ~ 2025
WATA AI
Main PM on the Pulmuone digital twin build and operations, and won the USFK Camp Humphreys logistics warehouse project.

2021 ~ 2023
loplat
Advanced a location-data B2B solution and launched a new service on a 1M-user base.

2019 ~ 2020
Barunsesang Hospital
Introduced a healthcare ERP and streamlined hospital supply and operating processes.

2016 ~ 2018
SK Telecom
Designed the AI speaker's persona and CUI, and planned the PyeongChang Olympics service.

2015 ~ 2016
Seoul Housing & Communities Corp.
Managed public rental-housing assets and optimized housing-welfare service processes.

2013 ~ 2014
Param Interactive
First to design a K League mobile matchday service; validated demand with 91% fan approval.

2009, 2011
Korea Football Association
From designing the national-team mascot 'Baekho' to running the nationwide school leagues, building a base in sports administration and branding.

2010
2022 World Cup Bid Committee
Press response at the FIFA host selection in Zurich, the 'Leaders in Football' conference in London, and field work at the South Africa World Cup. Governance experience aligning government bodies and global institutions.

Contact

The next problem, solved together

Whether it's owning a live product's metrics or building a new one from zero, I'll own the work of defining it, structuring it, and confirming it in numbers.

leeckv@naver.com
